

SDP enhancement **highlights** changed data

PSST clients value Seamless Data Portal's (SDP) Historical Module because it allows them to view changed data over time—an important tool for trend tracking and decision making.

Clients tell us it would be helpful to see exactly *what* data has changed each time a record is updated, so we're responding with a new software enhancement that **highlights changed data.**

The highlight feature, which will be available August 15, 2014, includes many employee-related tables, position control and control table data in the historical view, such as:

- | | | |
|-----------------------------|--------------------------|-------------------------|
| Employee Accruals | Employee Address | Employee Assignments |
| Employee Certifications | Employee Deductions | Employee Dependents |
| Employee Emergency Contacts | Employee I-9 Data | Employee Job Salary |
| Employee Master | Employee Skills | Employee Telephone Data |
| Employee User Field Data | Position Control History | Allocation Codes |
| Bargaining Unit | G/L Segments | Job Class Codes |
| Locations | Pay Type Codes | Payroll Misc Codes |
| Personnel Misc Codes | Salary Table Data | Work Locations |

The test screen below shows how highlighting calls attention to changed data:

Emp ID: 1
Name: ROACH, LARRY R
